DETAILED ACTION

Priority

1. Receipt is acknowledged of papers submitted under 35 U.S.C. 119(a)-(d), which papers have been placed of record in the file.

Specification

2. The disclosure is objected to because of the following informalities: makes reference to cancelled claim 10. See page 2, for example.

Appropriate correction is required.

Claim Objections

3. Claim 19 is objected to because of the following informalities: "the slip threshold" lacks proper antecedent basis and the actual brake torque has element number (2) not set forth in the drawings. Appropriate correction is required.

Claim Rejections - 35 USC § 112

4. The following is a quotation of the second paragraph of 35 U.S.C. 112:

The specification shall conclude with one or more claims particularly pointing out and distinctly claiming the subject matter which the applicant regards as his invention.

5. Claims 17, 20, 22, and 23 are rejected under 35 U.S.C. 112, second paragraph, as being indefinite for failing to particularly point out and distinctly claim the subject matter which applicant regards as the invention.

Re: claims 17 and 23. The phrase "the wheel" in line 2 of claim 17 is indefinite since it is unclear as to which wheel applicant intends to refer to. Similar issue in claim 23.

Re: claims 20 and 22. The phrase "it" and "another predetermined slip threshold" are indefinite. It is unclear as to what "it" refers to and there was no previously recited slip threshold in claim 13. Similar issue in claim 22

Claim Rejections - 35 USC § 102

6. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

7. Claims 12, 21, 22, and 23 are rejected under 35 U.S.C. 102(b) as being anticipated by US Patent 6351703 to Avery Jr.

Avery Jr. discloses a method for actuating an electrically controllable parking brake, wherein, at a driving speed exceeding a predetermined minimum speed, the brake torque at the braked wheels is reduced, in order to prevent locking of the wheels braked by the parking brake. See claim 6.

Claim Rejections - 35 USC § 103

8. The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

9. Claims 13-20 are rejected under 35 U.S.C. 103(a) as being unpatentable over Avery Jr. in view of US Patent 5852330 to Yumoto.

Yumoto teaches the use of a relationship between monitored slip and reduced brake torque. See claim 11.

It would have been obvious to one of ordinary skill in the art at the time the invention was made to have modified the method of Avery Jr. to have included the monitoring of slip, as taught by Yumoto, in order to determine a reduction of brake torque in the system.
